Working Gas in Underground Storage Data Released June 8, 2006 at 10:30 A.M., For the Week Ending June 2, 2006

Region	Stocks (Bcf) for June 2, 2006	Stocks (Bcf) for May 26, 2006	Implied Net Change (Bcf)	Year Ago Stocks (Bcf)
East	1,213	1,169	44	917
West	321	306	15	287
Producing	786	768	18	664
Total Lower 48	2,320	2,243	77	1,868

Region	5-Year (2001-2005) Average Stocks (Bcf)	Difference from 5-Year Average (Percent)
East	834	45.4
West	252	27.4
Producing	556	41.4
Total Lower 48	1,642	41.3

Notes and Definitions

Note: This report tracks U.S. natural gas inventories held in underground storage facilities. The weekly stocks generally are the volumes of working gas as of the report date. Changes in reported stock levels reflect all events affecting working gas in storage, including injections, withdrawals, and reclassifications between base and working gas.

Note: The weekly storage estimates are based on a survey sample that does not include all companies that operate underground storage facilities. The sample was selected from the list of storage operators to achieve a target standard error of the estimate of working gas in storage which was no greater than 5 percent for each region. Based on a comparison of weekly estimates and monthly data from May 2002 through March 2006, estimated total working gas stocks have exhibited an average absolute error of 19 billion cubic feet, or 0.9 percent. For an expanded discussion of the relationship between the current and prior estimates, please see [Differences Between Monthly and Weekly Working Gas in Storage](#).

Storage Highlights:

Working gas in storage was 2,320 Bcf as of Friday, June 2, 2006, according to EIA estimates. This represents a net increase of 77 Bcf from the previous week. Stocks were 452 Bcf higher than last year at this time and 678 Bcf above the 5-year average of 1,642 Bcf. In the East Region, stocks

were 379 Bcf above the 5-year average following net injections of 44 Bcf. Stocks in the Producing Region were 230 Bcf above the 5-year average of 556 Bcf after a net injection of 18 Bcf. Stocks in the West Region were 69 Bcf above the 5-year average after a net addition of 15 Bcf. At 2,320 Bcf, total working gas is above the 5-year historical range.

Working Gas in Underground Storage Compared with 5-Year Range

Notes: A weekly record for March 8, 2002, was linearly interpolated between the derived weekly estimates that end March 1 and the initial estimate from the EIA-912 on March 15. The shaded area indicates the range between the historical minimum and maximum values for the weekly series from 2000 through 2004.
